About Me

Computer Science Engineering graduate skilled in Java, Spring Boot, Python, FastAPI, SQL, and backend development. Experienced in building AI-powered applications using RAG, LLMs, Ollama, REST APIs, and databases. Seeking an entry-level Software Developer role.

Technical Skills

- Programming: Java, Python, SQL
- Backend: Spring Boot, FastAPI, REST APIs
- Database: PostgreSQL
- Model: RAG, LLM, Ollama
- Tools: Git, GitHub, Postman

Language

- English
- Tamil

Education

Bachelor of Engineering (COMPUTER SCIENCE AND ENGINEERING) 2021 - 2025

K RAMAKRISHNAN COLLEGE OF TECHNOLOGY

CGPA: 7.23/10

HSC 2021

SREE VENKATESWARA VIDYALAYA HIGHER SECONDARY SCHOOL

SSLC

SRI VIGNESH VIDYALAYA HIGHER SECONDARY SCHOOL 2019

Course

Machine learning - ACMEGRADE

By ACMEGRADE's machine learning course I have learnt to tackle real-world data challenges through cutting-edge algorithms and techniques.

Experience

INTERNSHIP Nov 2023-Dec 2023

Salesforce | Salesforce Administrator

- Configured Salesforce objects, workflows and user permissions,Customized Salesforce features based on business requirements.
- Managed and optimized data workflows to improve data accessibility,Worked with Salesforce administration and platform customization.

Projects

AI-Powered Personal Assistant using RAG

- Developed an AI-powered personal assistant using Python and FastAPI with Retrieval-Augmented Generation (RAG).
- Integrated Ollama with a local LLM for context-aware response generation. Implemented a modular backend architecture with API-based communication between the assistant and LLM provider.Reduced query latency by 35% using local Ollama embeddings
- Integrated Speech-to-Text and Text-to-Speech for voice interaction.Designed the system to support multilingual voice-based interaction.

Paddy leaf disease prediction system

- Developed a CNN-based machine learning model to classify and predict diseases in paddy leaves, supporting early disease detection and reducing potential crop losses with "Achieved 94% classification accuracy on 5,000+ leaf images"
- It works in a manner to minimize high-level damage to agricultural productivity. Similarly, this would contribute to upholding sustainable agriculture and food security

Quiz Application Using Spring Boot

- Developed a complete backend Quiz Application using Spring Boot and PostgreSQL, implementing full CRUD operations for quiz and question management.
- Designed and integrated RESTful APIs, thoroughly tested and verified using Postman for reliability and accuracy.
